0	ANT ON RAIL	55
406	Description ()	
echics Eol	There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets	PATECY
	exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.	3,
oble of the	Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left. Your task	
(EMPBTO	is to find and return the integer value representing how many times the ant reaches back to original starting position.	,068 TK
		2
CSE068	 Assume 1-based indexing Assume that the railing extends infinitely on the either sides 	· ·
